Appl. No. 10/029,663 Amdt date August 13, 2003 Reply to Office action of January 15, 2003

REMARKS/ARGUMENTS

The Office action dated January 15, 2003 has been reviewed and the comments therein carefully considered. It is noted that objections are made to the drawings as submitted with the application. Applicant will submit replacement drawings in due course upon indication of allowance of claim.

In the Office action, various issues and questions are presented regarding the description of the new variety. By the amendments as submitted in the accompanying Substitute Specification, Applicant has made a bona fide attempt to respond to each of the issues set forth in the Office action in accordance with the statutory requirement to provide a reasonably complete description.

In view of the foregoing amendment and remarks, it is respectfully submitted that the application is now in condition for allowance and, accordingly, reconsideration and allowance are earnestly solicited. If any questions remain regarding the allowability of the application, the Examiner is invited to contact the undersigned at the telephone number indicated below.

Respectfully submitted,

CHRISTIE, PARKER & HALE, LLP

CLEMATIS PLANT NAMED'VANSO'

RECEIVED AUG 1 9 2003

OFFICE OF PETITIONS

The present invention relates to a new Clematis plant.

VARIETY DENOMINATION

The new plant has the varietal denomination 'VANSO'.

10

15

20

BACKGROUND OF THE INVENTION

The present invention relates to a new Clematis plant having the varietal denomination 'VANSO'. 'VANSO' was discovered as a natural branch mutation of the variety 'MRS. CHALMONDELEY', not known to be patented.

SUMMARY OF THE INVENTION

The new variety is a Clematis plant with a climbing habit distinguished by production of fully double flowers. Asexual reproduction of the new variety as performed by softwood cuttings in Boskoop, the <u>The</u> Netherlands has confirmed that the distinguishing characteristics of the new variety are transmitted through succeeding generations <u>and asexually reproduced plants</u> of the new variety reproduce true-to-type.

25

COMPARISON WITH PARENT

The new variety differs from its parent, 'MRS. CHALMONDELEY', in producing flowers which are fully double; whereas flowers of the parent variety are single.

BRIEF DESCRIPTION OF ILLUSTRATIONS

The accompanying illustrations depict specimen flowers plants of the new variety in color as true as possible in color photographic illustrations of this nature.

One figure FIG. 1 shows the plant of the new variety with a cluster of flowers; and

The other figure FIG. 2 shows a close up of the flower of the new variety.

DETAILED DESCRIPTION OF THE NEW VARIETY

The following is a description of the new variety taken from 2-year-old plants grown out-of-doors in 5 liter containers in Boskoop, the The Netherlands during the month of June. Color designations used herein are from the THE ROYAL HORTICULTURAL SOCIETY COLOUR CHART ("RHSC").

PLANT PLANT

20 The plant grows in a climbing habit and attains a height of slightly more than 2 M. with an average diameter of about 35 cm. and with vigorous growth.

FOLIAGE FOLIAGE

25 Size: About 5 cm. to 8 cm. long and up

to about 4.8 cm. wide.

Quantity: About 6 leaves (3 pairs of

opposite leaves) per about 15 cm.

stem.

30 <u>Leaf</u>

Average length: About 15.3 cm.
